DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group I, Claims 1-9, drawn to Apparatus for Processing a Surface of Substrate, classified in class 118, subclass 723+.

Group II, Claims 10-22, drawn to Method of Processing a Surface of Substrate, classified in class 438, subclass 758.
2. The inventions are distinct, each from the other because of the following reasons:
3. Inventions Group II and Group I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus bias source can be used to generate plasma that can be used to treat a substrate (i.e., for a surface treatment of a particular film) instead of to generate plasma to process a substrate (i.e., for etching the film, such as silicon nitride film).
4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
